Võ Lê Việt Tú	22127435	Search & Filter	Done
Trần Thị Cát Tường	22127444	Add Category	Done

2 Usability Testing

2.1 Tested Feature

The feature selected for usability testing is the “**Add Category**” form in the **Tool-shop** web application. This interface allows users to create a new product category by filling out fields including **Parent Id**, **Name**, and **Slug**, and then clicking the **Save** button or the **Back** link to return to the previous screen.

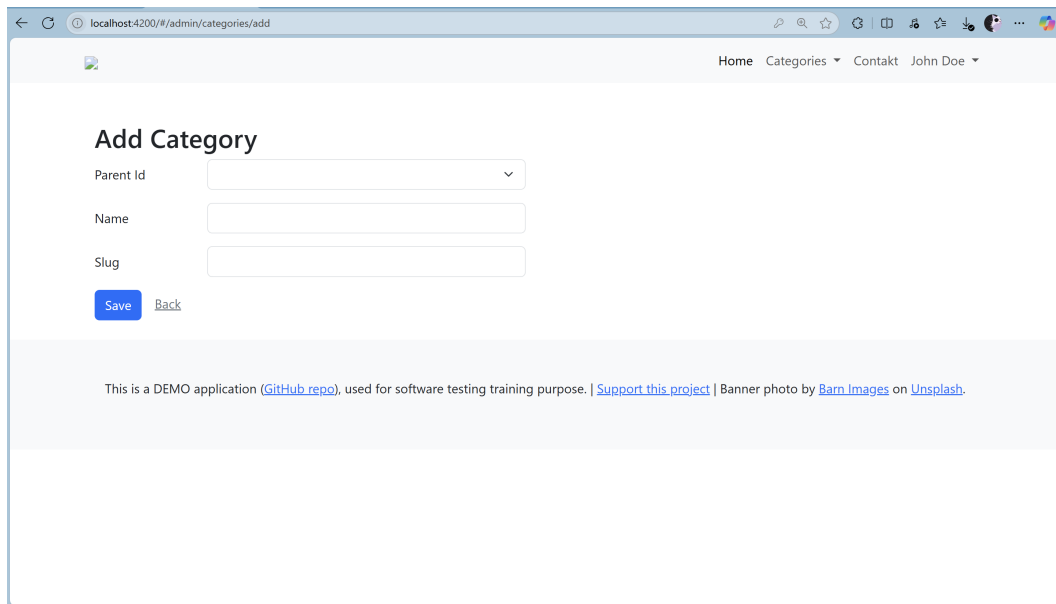

A screenshot of a web browser showing the 'Add Category' form. The browser's address bar shows 'localhost:4200/#/admin/categories/add'. The page has a navigation bar with 'Home', 'Categories', 'Contact', and 'John Doe'. The form itself has a title 'Add Category' and three input fields: 'Parent Id' (a dropdown menu), 'Name' (a text box), and 'Slug' (a text box). Below the fields are two buttons: a blue 'Save' button and a 'Back' link. At the bottom of the page, there is a footer text: 'This is a DEMO application (GitHub repo), used for software testing training purpose. | Support this project | Banner photo by Barn Images on Unsplash.'

2.2 Survey Design

A usability survey consisting of **11 questions** was designed using **Google Forms**. The questions covered various aspects such as clarity of labels, ease of interaction, layout alignment, and overall user satisfaction. The survey included **multiple-choice**, **Likert scale (1–5)** ratings, and **one open-ended question**.

Survey Link: [\[Google Form link\]](#)

A total of 7 participants completed the survey. The demographic breakdown is as follows:

- 2 high school students
- 4 university students
- 1 working professional

This mix of participants helped ensure that the feedback captured a range of perspectives, from beginner to more experienced users.

2.3 Summary of Responses

Below is a summary of key insights gathered from user feedback:

- **71.4%** of users had never heard of the “Add Category” feature before
- **85.7%** clearly understood the purpose of the screen
- **100%** found the input fields and **Save** button easy to locate and use
- **28.6%** said the label “**Parent Id**” was unclear
- **42.9%** said the label “**Slug**” was confusing or ambiguous
- **28.6%** rated the form layout and spacing at only 3 out of 5, suggesting room for layout improvement
- Overall satisfaction was moderate, with the majority of users selecting a score of 3 or 4 out of 5, and no users giving the highest rating.

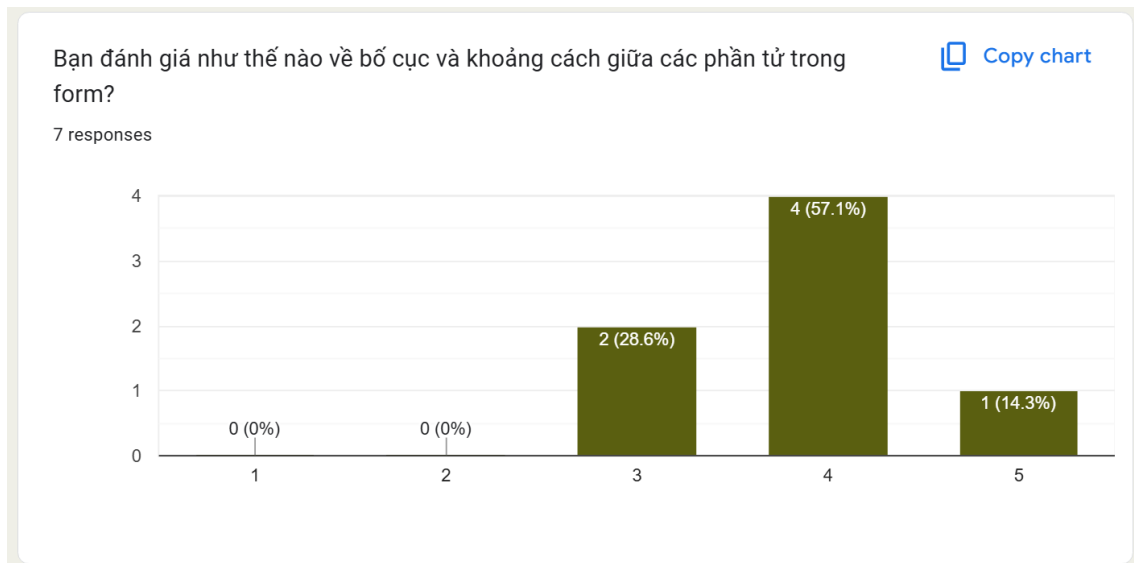

Figure 2: Overall satisfaction

2.4 Usability Concerns Reported by Users

Some of the most notable concerns or suggestions raised through open-ended feedback include:

- The label “**Parent Id**” is misleading.
- Lack of tooltips or placeholder text for fields such as **Slug**, causing confusion.
- Footer is too close to the content area and appears visually unbalanced.
- The overall visual design feels minimal or plain; users suggested improving color contrast and repositioning the Save button.

2.5 Conclusion and Recommendations

The “**Add Category**” feature was generally perceived as **usable and easy to understand**, even by first-time users. However, a few usability concerns emerged, mostly related to ambiguous field labels and UI layout.

Suggested improvements:

- Replace technical terms like **Slug** with user-friendly alternatives or add short explanations
- Display clear feedback (success/error) after form submission

- Reposition and resize the **footer** for better balance
- Enhance visual clarity by adjusting spacing, alignment, and action button placement

3 Self-Assessment

Criteria	Outcomes	Grade	Self-Assessed
1	Checklist of one GUI	30	30
2	AI tools	20	20
3	User survey and feedback	30	30
3.1	Questions (10)	10	10
3.2	Feedback (7)	10	10
3.3	Report	10	10
4	BrowserStack	30	30
5	Bug report	30	30
5.1	GUI	10	10
5.2	Usability	10	10
5.3	Cross-platform	10	10
	Total	140	140
